THERMAL BARRIERS

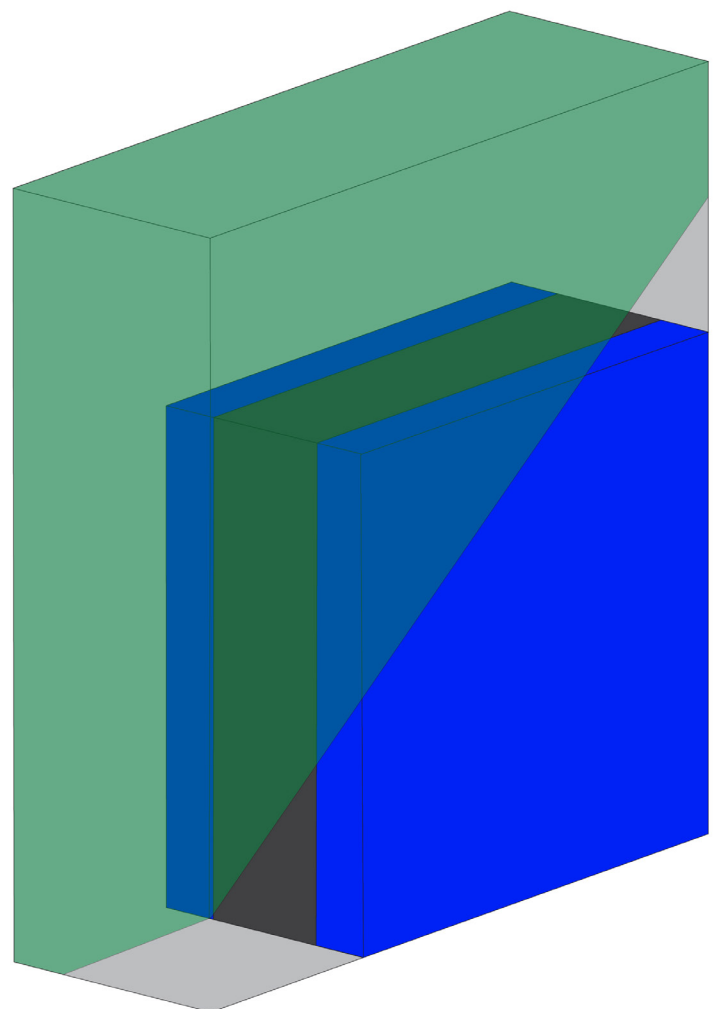

Tegral's Chiller Boards (also known as freezer boards, thermal barriers) are designed to create the perfect division between frozen and chilled products. We combine 70mm of closed cell foam insulation with a full outer skin, protecting the foam from damage.

The foam core provides flexibility and strength, while offering superior insulating properties. Light Green is standard, but we have multiple colour options available.

Visit our website to see the full colour range: <https://www.tegral.com.au/freezer-boards/>
Please see the back cover for a measure sheet.

**Designed to last |
Custom fit for your unit**
